
Alzheimer's disease PPI network

Functional clusters (node colour)

- 1. APP processing & amyloid
- 2. Apoptosis & neuronal death
- 3. Translation & protein folding
- 4. Growth factor & IGF signalling
- 5. Glutamatergic synapse

Gene origin (node shape)

- known Alzheimer's gene (seed)
- added by DIAMOnD

Drugs (node border)

- target of an approved AD drug
- bound by any DrugBank compound

Node size: betweenness centrality

Labels: hubs, bottlenecks and AD drug targets
